

# It is illegal to fly a drone or model aircraft that does not show a valid OPERATOR ID.

## How to label your drone or model aircraft. Your operator ID must be:

- visible without needing a special tool to remove or open part of your aircraft
- clear and in block capitals taller than 3mm
- secure and safe from damage
- on the main body of the aircraft
- easy to read when the aircraft is on the ground

You should use a removable label as your operator ID. You'll need to remove your label if you're no longer responsible for the drone or model aircraft.

Always use your operator ID, not your flyer ID.
